

Tooling – Plastics Injection, Sheet metal, Casting

GPS give you a range of tooling for plastics injection moulding, sheet metal stamping or casting tools at Germany's quality with fast turnaround times.

- Highly skilled tooling designers and engineers, from design and prototyping, tool build and test to final part approval
- Large source of supply and capacity with quick turnaround, leadtime improvement on 'soft' or hardened tools
- CAE/CAD/CAM, DFM, Mold-flow and 3D design software platforms to adapt to customers' system, Unigraphics, AutoCAD, Solidworks, Pro-Engineer, capable of interface with IGES, STEP, PARASOLID, DXF, STL and CATIA
- Design and manufacture tools, die's and molds according to customer specification, or reverse engineering on existing parts

Customer benefits include:

- Global mold design practices
- 3D associated design
- Integrated prototyping and production tooling
- Shorter lead times
- Quick design changes and modifications
- Greater precision
- Competitive pricing
- Highest quality – Germany standard
